

Hello, I'm Ron Woody, Roane County Executive, Welcome and Thank You Kairos Power for choosing Roane County, TN and the City of Oak Ridge for your investment in the next generation of Nuclear Power.

The vision and planning for this next generation of energy in the form of a small modular reactors has been in discussion for decades, but this past year we have started seeing concrete evidence of true development in this industry as Kairos Power purchased a former property used in research, advanced technology and manufacturing enrichment of uranium.

We know this investment is a big step for Kairos.

Your leadership team of CEO Mike Laufer, and Vice President of Regulatory Affairs, Peter Hastings, who has spoken about this investment at ETEC: Kairos has determined that the time is right, the technology is ready as the nation is transitioning to cleaner energy.

- The location is right, near one of the nation's premier National Labs, adjacent to a previous location of a proposed TVA breeder reactor, in a community that has worked in the nuclear business for decades with the Department of Energy and the Tennessee Valley Authority Nuclear Power Plant. Which reflects a welcoming community and a knowledgeable work force.
- The partnerships are right (Oak Ridge National Labs, TVA, the educational institutes University of Tennessee and the Community Colleges).

Thank you for your \$100 million investment, up to 55 high paying jobs, and being one of the anchor tenants in the East Tennessee Technology Park Heritage Center.

Thank you for playing a significant role in advancing Nuclear Technology and transitioning the United States to cleaner energy.

From Roane County, TN and the City of Oak Ridge, welcome Mike, Peter and the many others of the Kairos Family. We stand ready to help you develop this next generation of energy.
